Generate Invoice and Record Payment

Field	Answer
ID:	UC3
Title:	Generate Invoice and Record Payment
Description:	This use case describes how administrative staff generate an invoice for an uninsured (paid) service provided during a completed appointment, and register the patient's payment. The system verifies that the service is billable, records the applicable fees, generates the invoice, and registers the payment.
Primary Actor:	Administrative Staff
Preconditions:	- The Appointment Tracking System is operational - Administrative staff is authenticated and authorized to manage invoices and payments - The appointment's consultation has taken place (patient marked as Arrived)
Postconditions:	- An Invoice is created and associated with the appointment and patient - The invoice records the applicable fees - A Payment is created and associated with the invoice - The invoice status is updated to Paid - An activity record documenting the invoicing and payment is created and stored
Inputs:	1. Patient identifier or search information 2. Appointment identifier 3. Applicable fees 4. Payment amount and payment method
Outputs:	1. Patient and appointment information 2. Generated invoice 3. Payment confirmation / receipt 4. Error message if invoicing or payment fails
Main Success Scenario:	1. Administrative Staff selects the option to generate an invoice 2. System prompts for patient identification 3. Administrative Staff enters search information (insurance number, date of birth, phone number, name) 4. System displays the matching patients and their completed appointments that have not yet been invoiced 5. Administrative Staff selects the relevant appointment 6. System verifies the appointment is completed, is an uninsured service (not covered by RAMQ), and has no existing invoice 7. Administrative Staff enters the applicable fees 8. System creates the invoice and displays it with the total amount due

	9. Administrative Staff enters the payment amount and method 10. System verifies the amount covers the total due 11. System registers the payment, marks the invoice as Paid, and records the payment time 12. System creates an activity record for the invoicing and payment 13. System displays a payment confirmation
Failure Scenario: Service Not Billable	1. At step 6 of the main success scenario, the system determines the appointment is covered by RAMQ or already has an invoice 2. System displays a message stating that no invoice can be generated 3. No invoice or payment is created 4. Administrative Staff may select another appointment or end the use case
Failure Scenario: Payment Rejected	1. At step 10 of the main success scenario, the payment amount is invalid or insufficient for the total due 2. System displays an error message and the remaining balance 3. No payment is registered and the invoice remains Unpaid 4. Administrative Staff may re-enter the payment or end the use case, leaving the invoice unpaid
